Project Report

Name	TIRTHA NATH
College	SRM INSTITUTE OF SCIENCE AND TECHNOLOGY
Program	UI/UX design

Project - 1

Name of the Project: E-commerce app

One of my first projects in UI design. Poured a lot of passion on this one. This app interface is designed to replicate the good elements from different existing app designs and reduce the pain points as much as possible. The blue and green colour theme was selected here because they are a harmonious pair on the colour wheel and it also looks soothing to the eyes.

Tools Used: Figma,storyset

Working Procedure:

- **Conducted research on existing E-commerce app to find the pain points and improve upon them using latest design trends.**
- **Created user personas to better understand the target audience's needs and what design elements are best suited for them.**
- **Created an empty frame of a phone to use as a canvas for the design of the app.**
- **Utilized layout grids in figma to better integrate the elements of the project in an intuitive and clean manner.**
- **Used a design combination consistently across all screens for helping users easily recognize and navigate menus and buttons.**
- **Used an eye-soothing colour scheme to ensure a comfortable experience for the user.**
- **Made all the buttons and menus bright to be easily visible on the dark background , using various tools in figma to ensure design consistency.**
- **Used drop down shadows and blur effects for a sophisticated look and feel.**
- **The buttons are made pill shaped just for the simple reason that most of the users prefer smooth designs on apps like these.**
- **To complement the dark blue and light green background , white and black text colours were used respectively to ensure high contrast and readability.**

Learning Outcomes:

- **Gained professional hands-on experience towards UI/UX designing using Figma and developed this interface from scratch.**
- **Learned how to do user research and translate them into aesthetic and intuitive user interfaces.**
- **Learned how to use grid layouts to properly align different elements of the project.**
- **Acquired a better understanding about design principles such as consistency, spacing and alignment.**
- **Developed the ability to apply advanced effects like shadows and blur for a polished, modern UI.**
- **Learned the importance of colour selection in enhancing readability and to increase visual appeal.**

Project - 2

Name of the Project: Educational mobile app

In this project, I tried to go with a special and unique theme, in this case mango. Yes, it is kind of random but I felt like the colour scheme I had in mind was exactly like a mango, so yeah I went ahead with it. For this project I wanted to take inspiration from existing projects but also wanted a flair of my own.I got to play with gradients with the help of which I aspired to turn the boring educational app into something interesting.

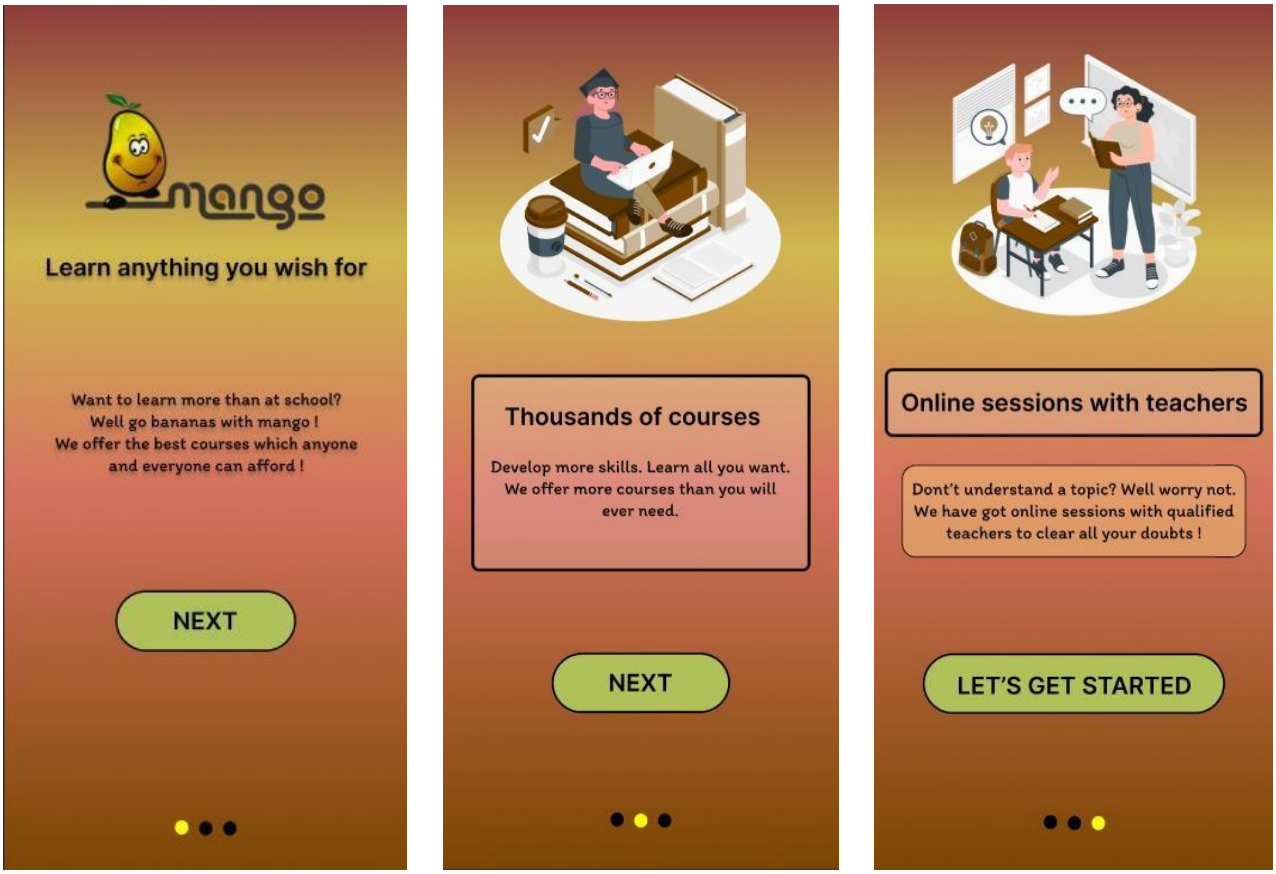

Tools Used: Figma,storyset

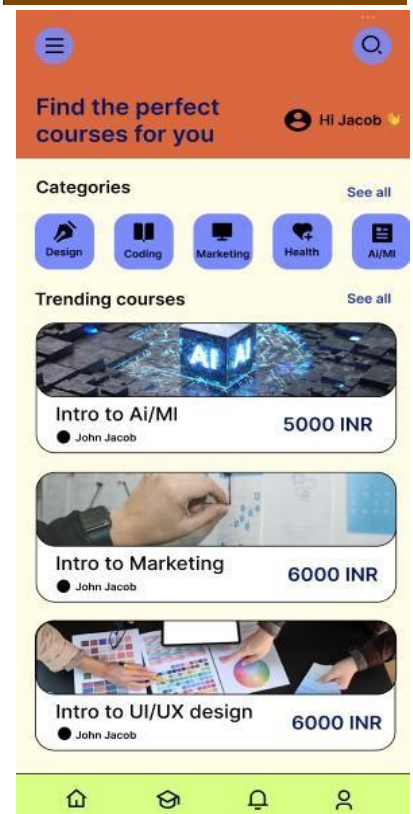

Working Procedure:

- **Conducted research on existing educational apps to find their flaws such as bland design and turn it into something better.**
- **Created user personas to better understand the student's needs and what design elements are best suited for them.**
- **Created an empty frame of a phone to use as a canvas for the design of the app.**
- **Utilized layout grids in figma to better integrate the elements of the project in an intuitive and clean manner.**
- **Used a design combination consistently across all screens for helping users easily recognize and navigate menus and buttons.**
- **Used a standout gradient theme for the welcome pages to let out the feeling of warmth for the newcomers.**
- **All the buttons and menus are made with contrasting colours to their backgrounds to enhance visibility and appeal.**
- **Used images and modern symbols for a modern and fresh feel.**
- **The buttons are a combination of both pill shape and rectangles with a slight curvature for a modern feel.**
- **To complement the shades of orange, yellow and blue are used as complementary colours.**

Learning Outcomes:

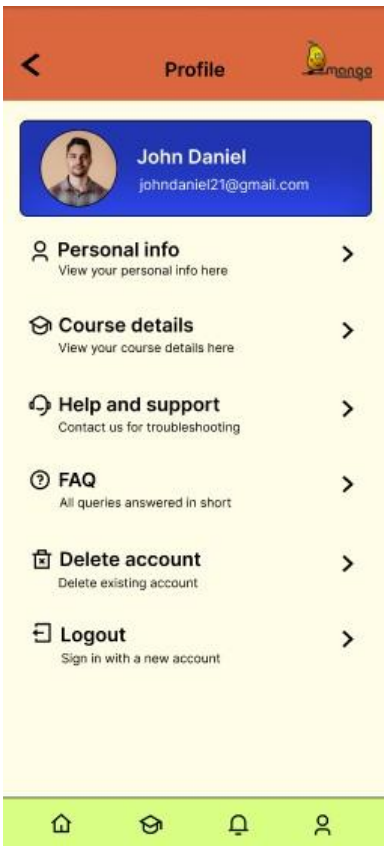

- **Gained more insight about figma by exploring features like gradient colours.**
- **Learned how these simple educational apps can explore different colours and themes.**
- **Learned how to use shapes in a better manner and how to align them better in a given limited space.**
- **Developed the ability to apply advanced effects like shadows,gradients and blur for a polished, modern UI.**
- **Learned the importance of colour selection in enhancing readability and to increase visual appeal for the users.**

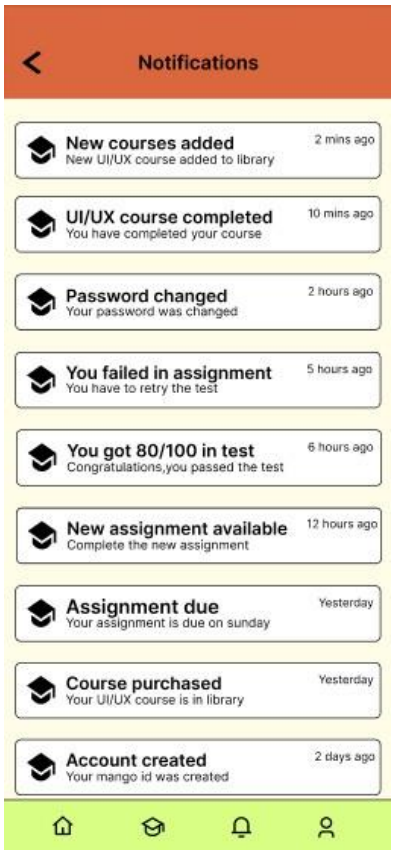

Project - 3

Name of the Project: Entertainment streaming app

In this project I tried to keep the interface simple for the movie posters to be better visible to the audience. I liked the black background idea from the platform airtel Xstream and tried to come up with a colour scheme which not only looked good but was also unique.

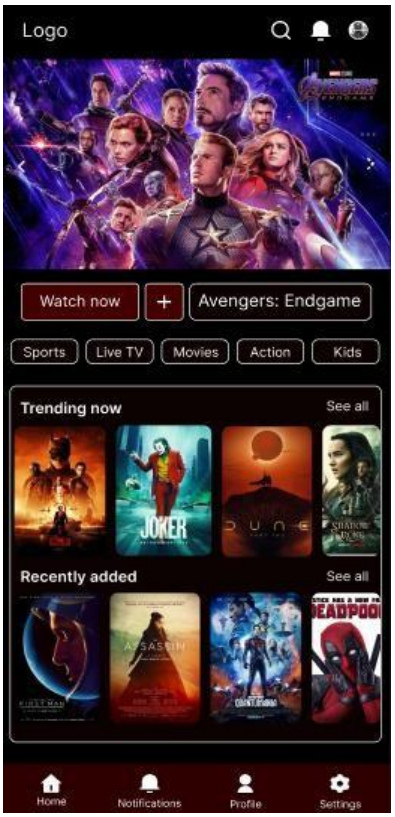

Tools Used: Figma,storyset

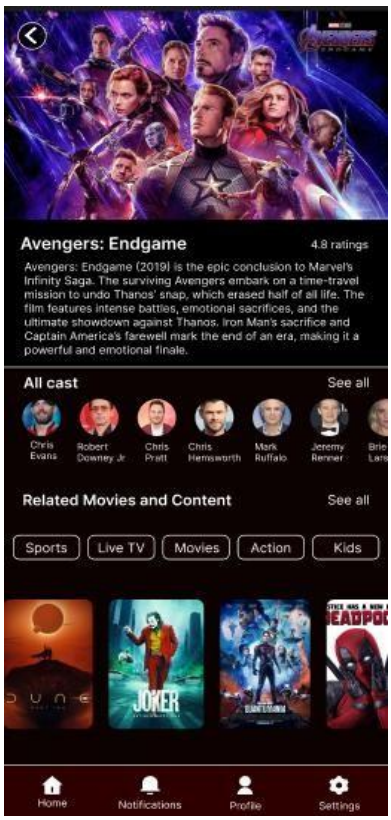

Working Procedure:

- **Conducted research on existing streaming app to find the pain points and improve upon them using latest design trends.**
- **Created user personas to better understand the target audience's needs and what design elements are best suited for them.**
- **Created an empty frame of a phone to use as a canvas for the design of the app.**
- **Utilized layout grids in figma to better integrate the elements of the project in an intuitive and clean manner.**
- **Used a design combination consistently across all screens for helping users easily recognize and navigate menus and buttons.**
- **Used a specialized black background and red theme for the user to easily navigate the colourful movie posters in the dark background.**
- **Made all the buttons and menus red for easy visibility on the black background and with white outlines for better separation between the menu and background.**
- **Used drop down shadows, translucent red backgrounds and blur effects for a sophisticated look and feel.**
- **The buttons are made in a rectangular shape with rounded corners to match the movie posters for a professional look.**
- **To complement the white and red background, white text colour was used to ensure high contrast and readability.**

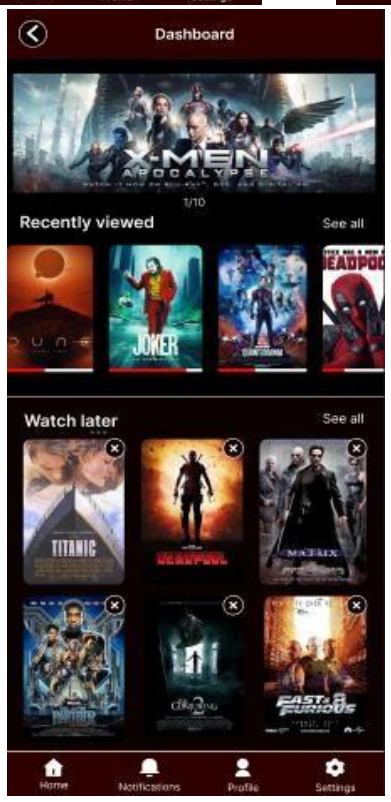

Learning Outcomes:

- **Gained more insight about figma by exploring features like translucent backgrounds.**
- **Learned how these entertainment streaming apps can be made to increase visual appeal by using proper format and segregation of categories.**
- **Learned how to use shapes in a better manner and how to align them better in a given limited space.**
- **Developed the ability to apply advanced effects like shadows and blur for a polished, modern UI.**
- **Learned the importance of colour selection in enhancing readability and to increase visual appeal for the users.**

Project - 4

Name of the Project: Food delivery app

This project aims to create a food delivery app interface and improve upon the pitfalls of the existing ones while maintaining a clean light theme with an enjoyable interface for the user to have a good time with the app. This app is also my first attempt at a completely light themed app interface therefore tried to explore new kinds of light colours to look better on white background theme.

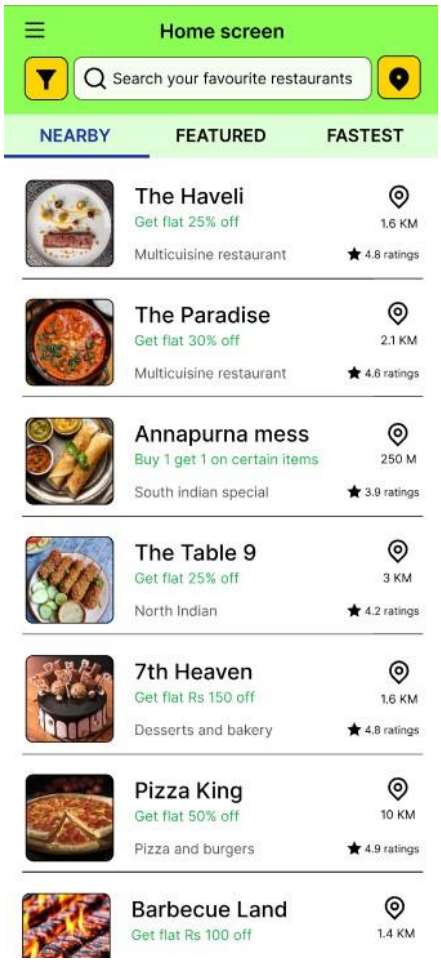

Tools Used: Figma,storyset

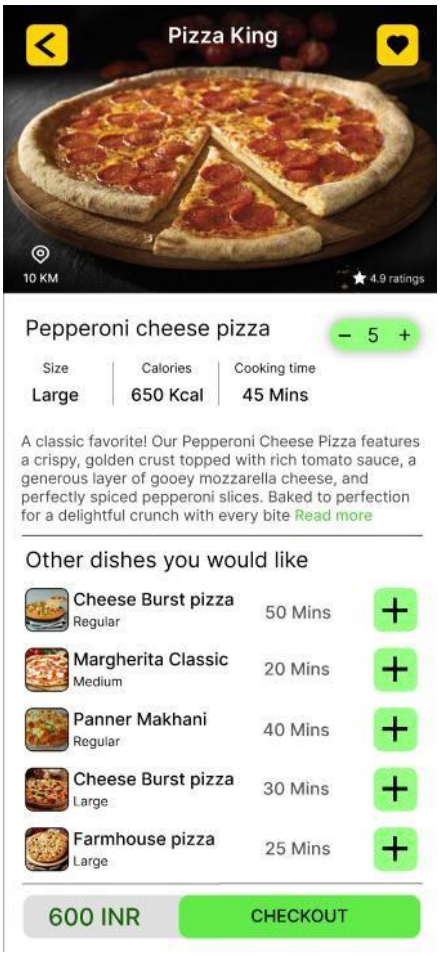

Working Procedure:

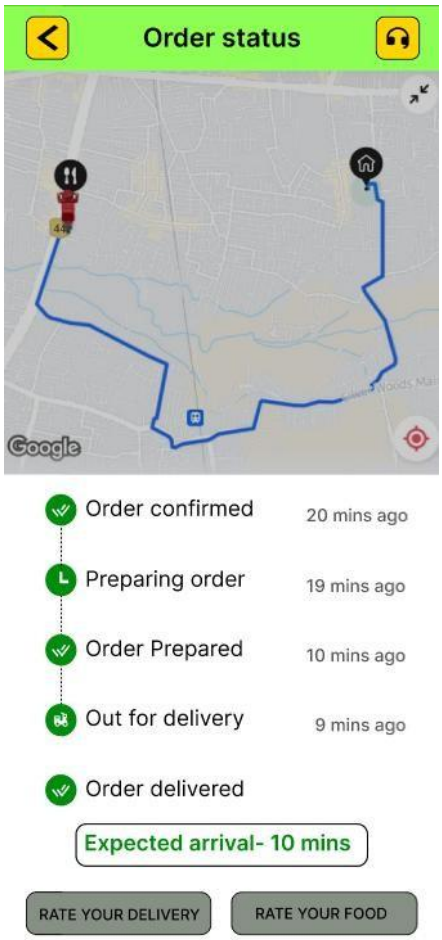

- **Conducted research on existing food delivery apps to find the pain points and improve upon them using latest design trends.**
- **Created user personas to better understand the target audience's needs and what design elements are best suited for them.**
- **Created an empty frame of a phone to use as a canvas for the design of the app.**
- **Utilized layout grids in figma to better integrate the elements of the project in an intuitive and clean manner.**
- **Used a design combination consistently across all screens for helping users easily recognize and navigate menus and buttons.**
- **Used a clean white background with yellow and green accent colours for the user to easily navigate the menu.**
- **Made all the buttons and menus yellow or green for good visibility on the white background and also to have separation between different functions.**
- **Used drop down shadows and blur effects for a sophisticated look and feel.**
- **The buttons are a mixture of pill shaped as well as traditional rectangular shape to signify the playful nature of the app while also maintaining a professional look.**
- **To complement the white, green and yellow colours , white and black text colour was used to ensure high contrast and readability.**
- **Used lines to separate different restaurants instead of boxes to get a cleaner look overall on the light background.**

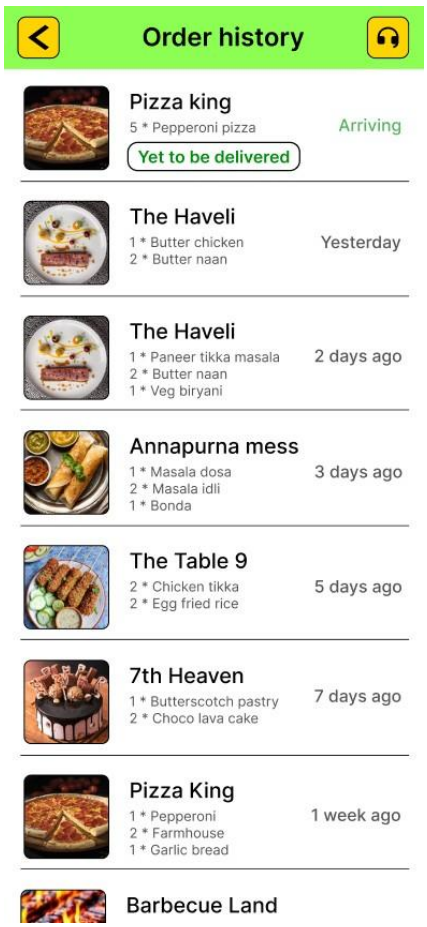

Learning Outcomes:

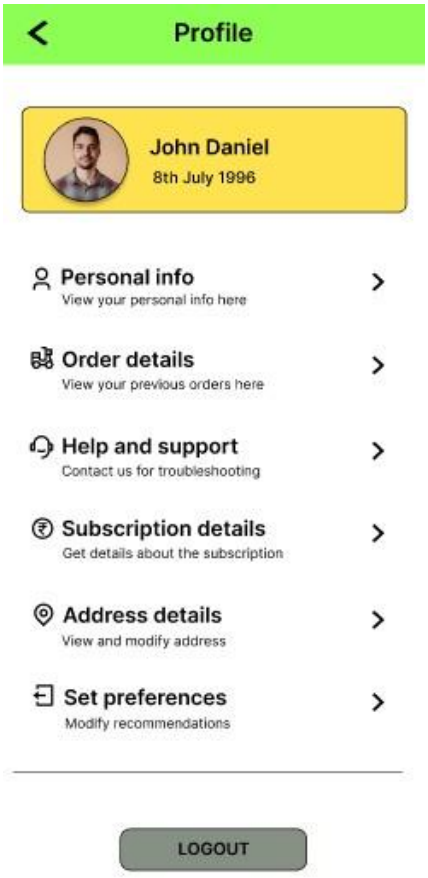

- **Gained more insight about figma by exploring features like use of coloured stickers and the use of better quality images.**
- **Learned to make a sophisticated and good looking interface for a food delivery app while maintaining a light theme.**
- **Learned how to use shapes in a better manner and how to make buttons look more alive with the help of drop down shadows**
- **Developed the ability to apply advanced effects like shadows and blur for a polished, modern UI.**
- **Learned the importance of colour selection in enhancing readability and to increase visual appeal especially for the light mode users.**

Project - 5

Name of the Project: Job search and recruitment platform

Tools Used: Figma,storyset

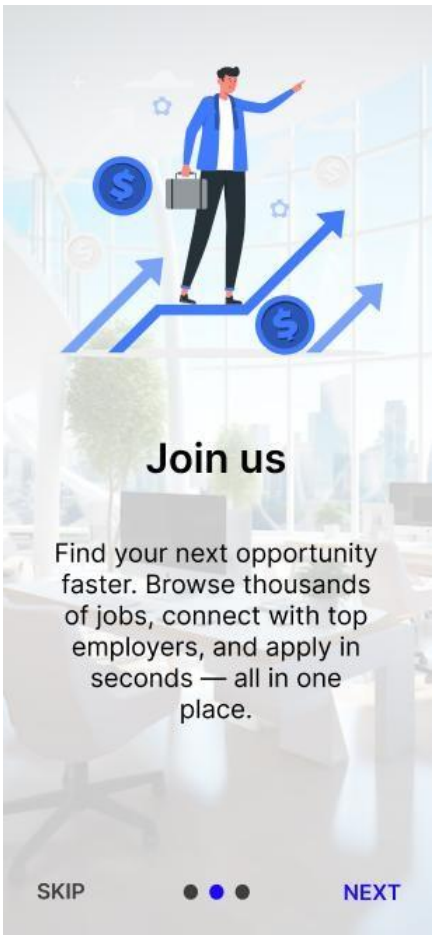

Working Procedure:

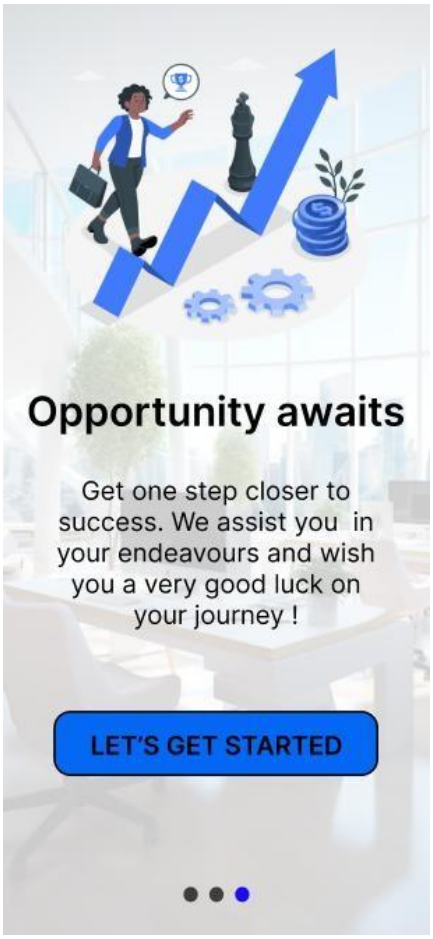

- **Conducted research on existing job search sites like LinkedIn to find the pain points and improve upon them using latest design trends.**
- **Created user personas to better understand the target audience's needs and what design elements are best suited for them.**
- **Created an empty frame of a phone to use as a canvas for the design of the app.**
- **Utilized layout grids in figma to better integrate the elements of the project in an intuitive and clean manner.**
- **Used a design combination consistently across all screens for helping users easily recognize and navigate menus and buttons.**
- **Used a themed image background this time to match the corporate vibes and keep it simple with the simple white and blue menu.**
- **Made all the buttons and menus blue because blue is seen as a sophisticated colour and also looks good on plain background.**
- **Used transparency and blur effects for a sophisticated look and feel.**
- **The buttons are mostly traditional rectangles with smooth corners to maintain the professional vibes of the app while also looking modern.**
- **To complement the mostly white and blue backgrounds, black text colour was used to have clean and simple look while having good visibility.**
- **Used boxes as separations because in some places a drop down menu was used and also this makes it simpler to navigate.**

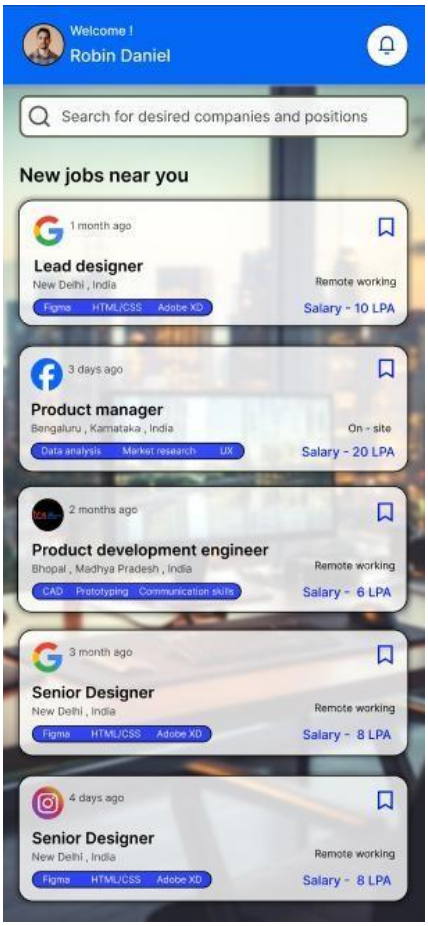

Learning Outcomes:

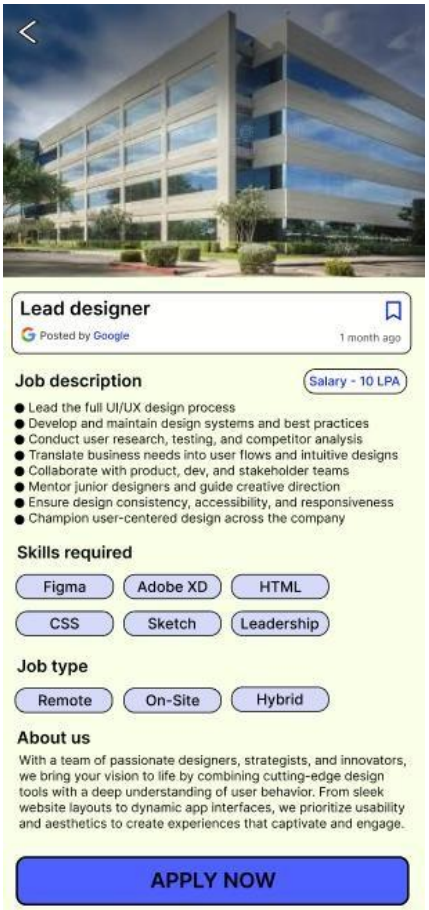

- **Gained more insight about figma by exploring features like use of coloured stickers and the use of better quality images.**
- **Learned to make a sophisticated and good looking interface for a job search site using a light and fresh theme.**
- **Learned how to use semi-transparent boxes to maintain the balance between the foreground and background better.**
- **Developed the ability to apply advanced effects like shadows and blur for a polished, modern UI.**
- **Learned the importance of colour selection in enhancing readability and to increase visual appeal especially for the light mode users.**
